

# Report on Weather and Hop Growing Conditions: Week 19

Report Period: May 9, 2022 - May 15, 2022

## HALLERTAU

**Comments:** The warm temperatures of the past week greatly accelerated the growth. Training is mostly completed. The plowing of the rows has begun.

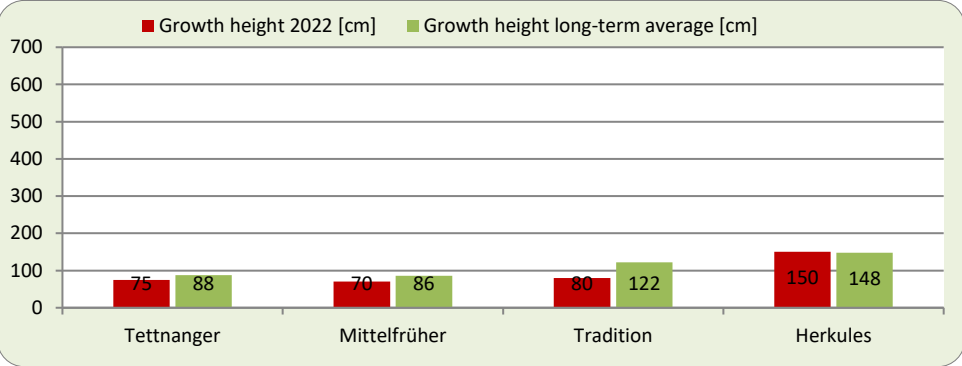

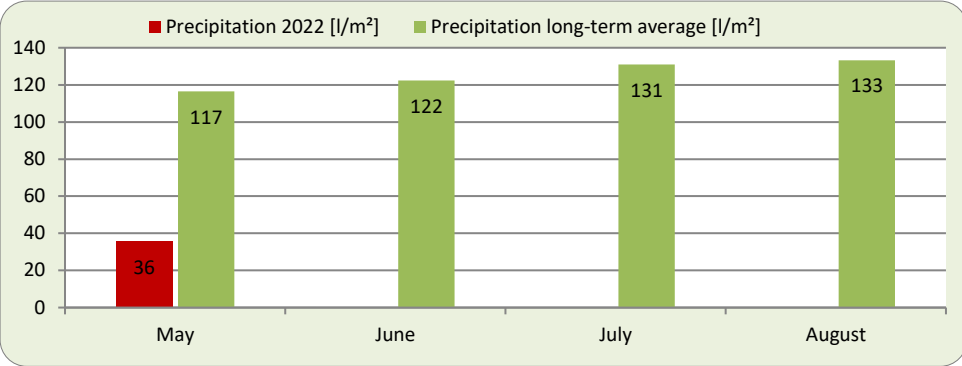

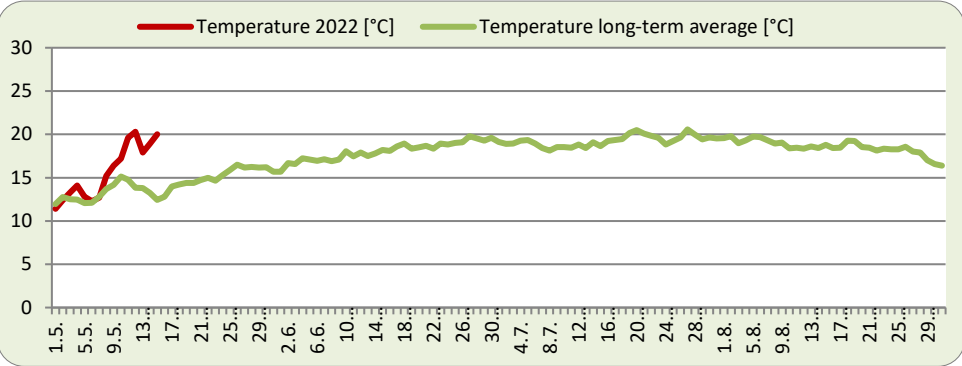

(Tendency: stable ↑, decreasing ←, increasing →)

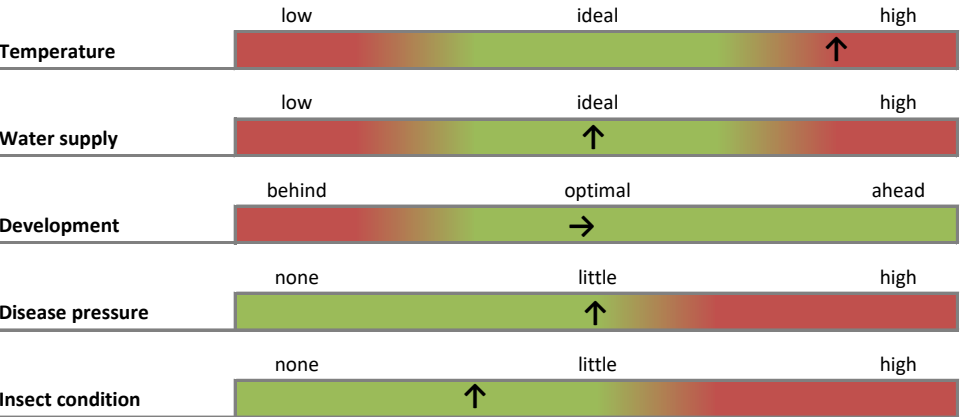

# Report on Weather and Hop Growing Conditions: Week 19

Report Period: May 9, 2022 - May 15, 2022

## TETTANG

**Comments:** Hops grew enormously last week, making up for their slight shortfall. Most of the farms are busy with training and retraining. Plant protection measures against downy mildew primary infection were carried out as required.

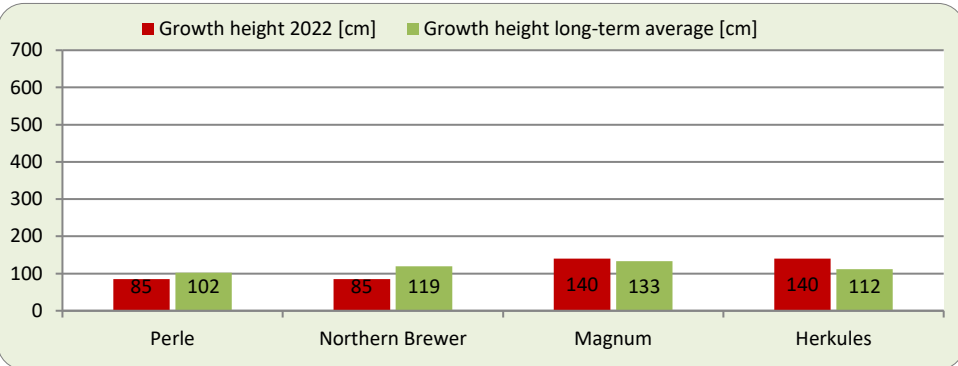

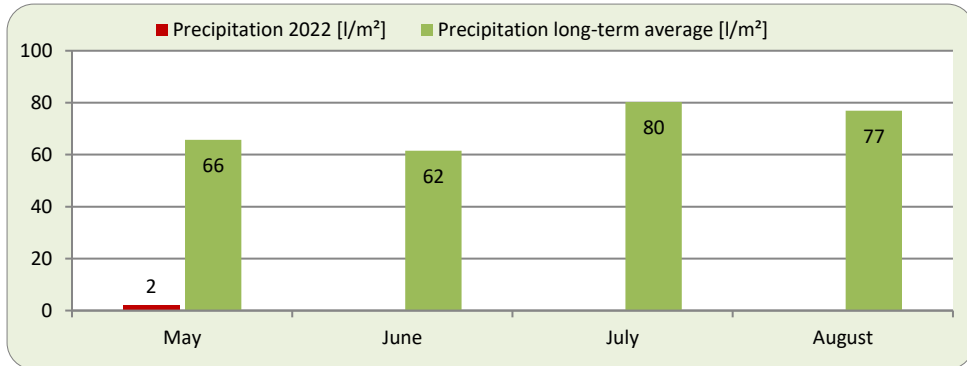

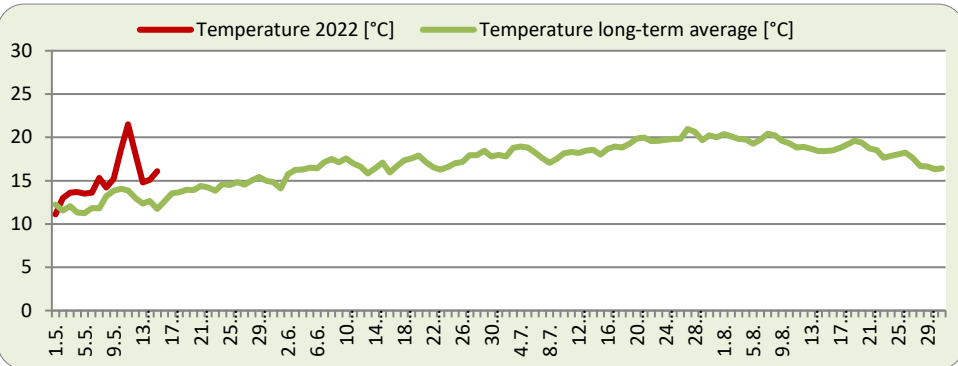

(Tendency: stable ↑, decreasing ←, increasing →)

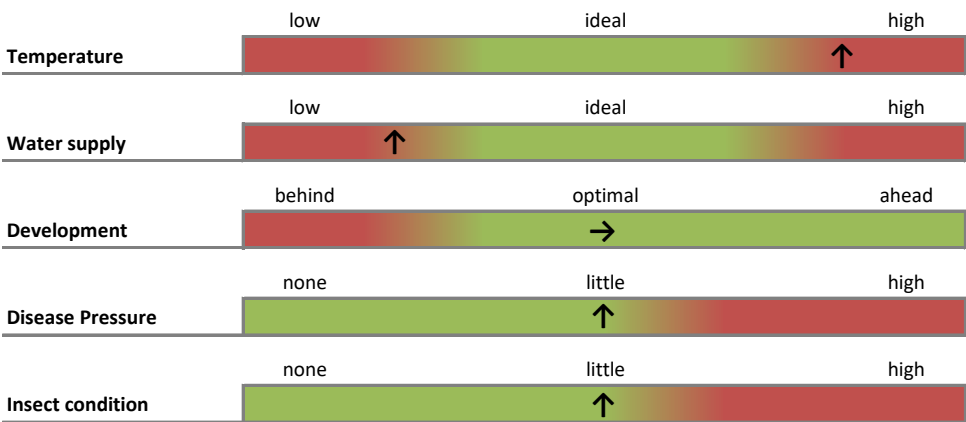

# Report on Weather and Hop Growing Conditions: Week 19

Report Period: May 9, 2022 - May 15, 2022

## ELBE SAALE

**Comments:** The hops have developed very well due to the warm temperatures. Bittering varieties Magnum and Herkules are even above the long-term average. There was no precipitation this week either. At the moment, the farms are busy with (re-)training, some of them have started plowing the rows. Plant protection measures against downy mildew primary infection have been carried out.

(Tendency: stable ↑, decreasing ←, increasing →)
