

# Report on Weather and Hop Growing Conditions: Week 21

Report Period: May 23, 2022 - May 29, 2022

## HALLERTAU

**Comments:** The week started with moderate temperatures, night temperatures significantly went down towards the weekend. The water supply varies from region to region but is still sufficient. What is striking this year is the current strong aphid influx, against which plant protection measures have already been carried out in some cases.

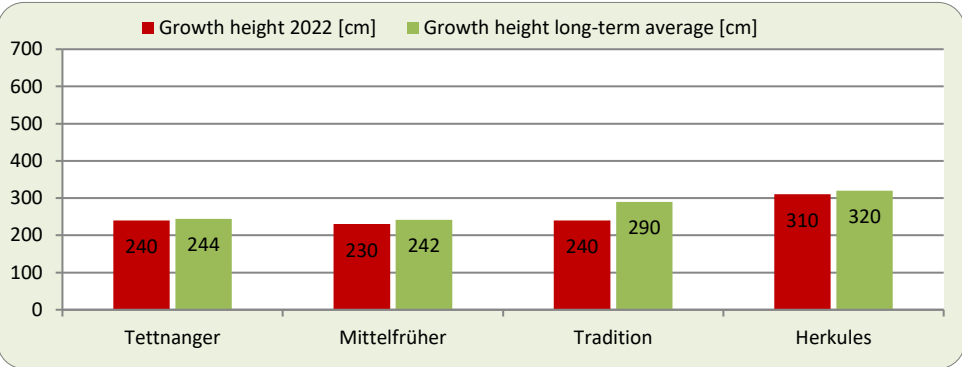

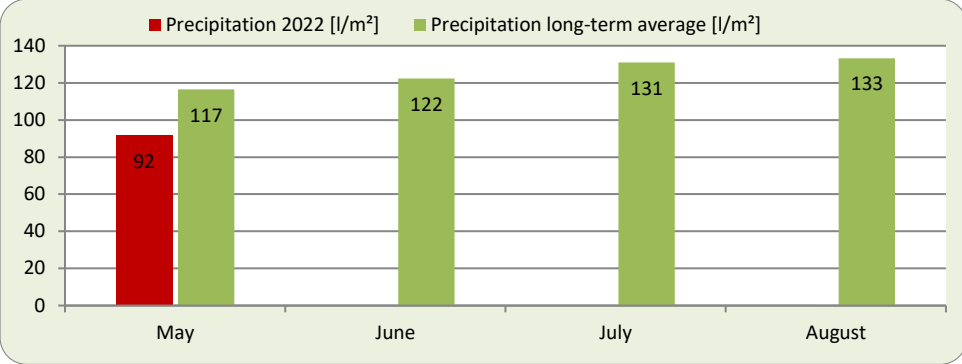

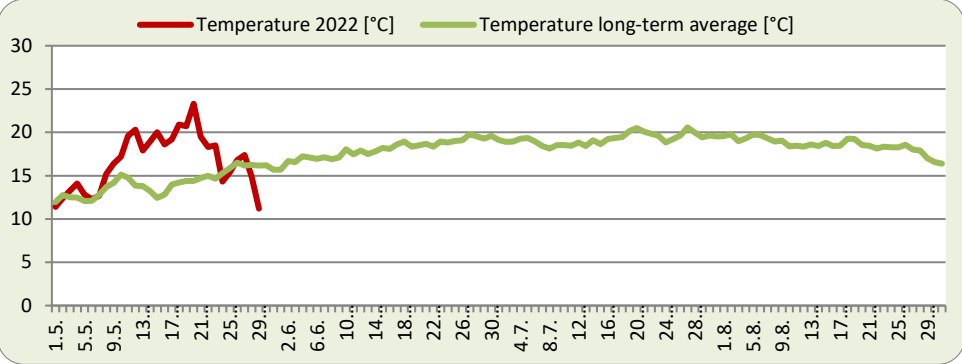

(Tendency: stable ↑, decreasing ←, increasing →)

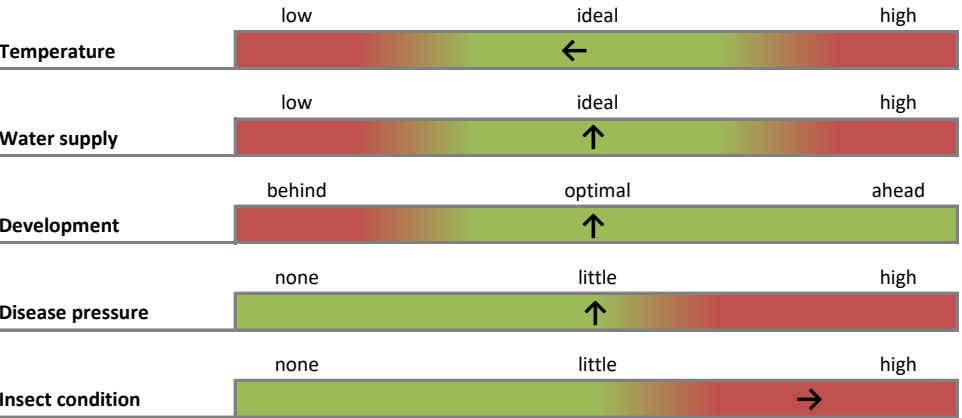

# Report on Weather and Hop Growing Conditions: Week 21

Report Period: May 23, 2022 - May 29, 2022

## TETTANANG

**Comments:** Thundershowers and warm temperatures provided good growing conditions at the beginning of the week. Plant protection measures due to aphid infestation are carried out.

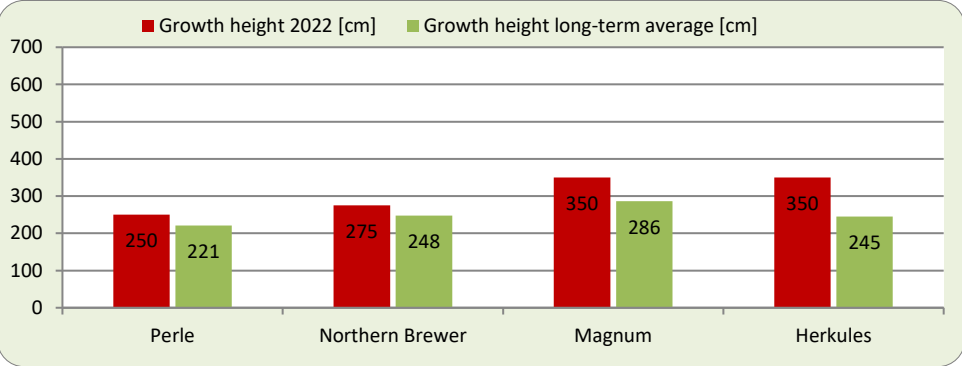

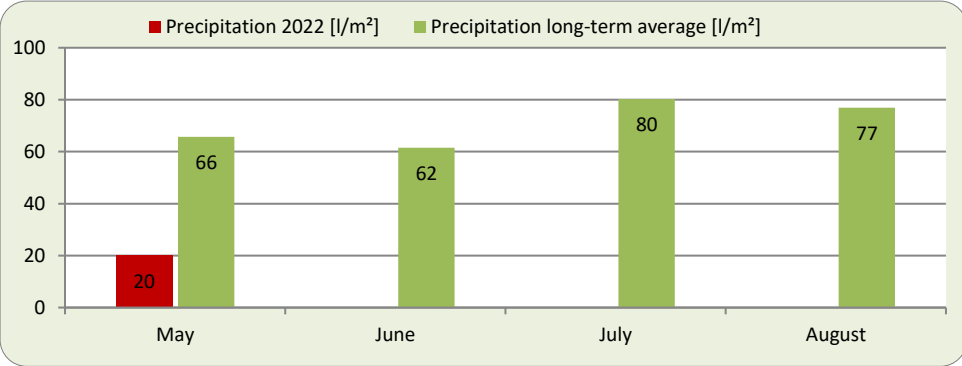

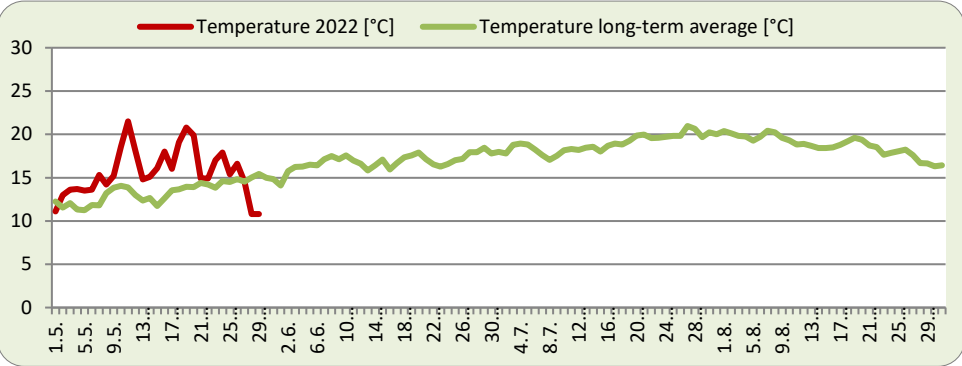

(Tendency: stable ↑, decreasing ←, increasing →)

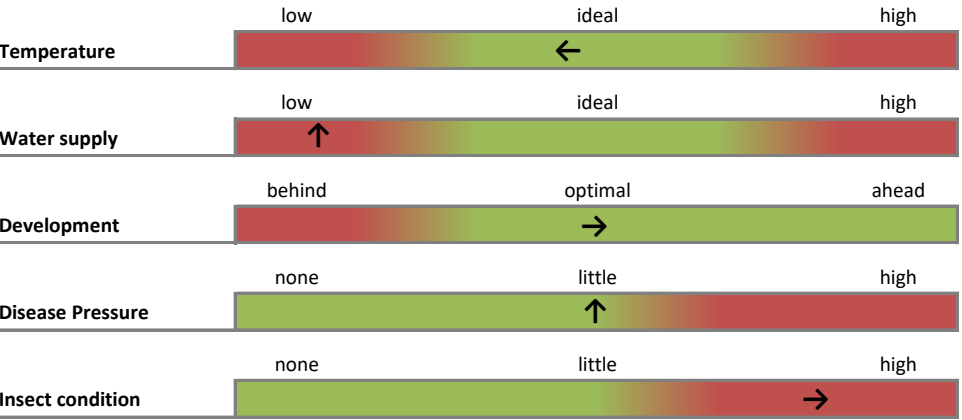

# Report on Weather and Hop Growing Conditions: Week 21

Report Period: May 23, 2022 - May 29, 2022

## ELBE SAALE

**Comments:** Only very few rain showers in low amounts didn't improve the water supply of the soils. The plowing of the rows was executed. Also in Elbe – Saale, strong influx of aphids is observed.
