

Report on Weather and Hop Growing Conditions: Week 23

Report Period: June 6, 2022 - June 12, 2022

HALLERTAU

Comments: The warm, humid weather continued. This provided good growing conditions. At the same time, however, disease pressure from fungal diseases increased. Therefore, a downy mildew spray call was issued for all varieties.

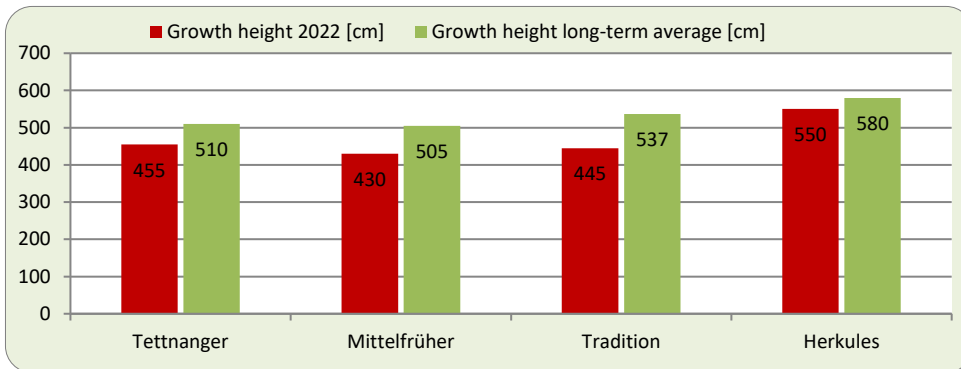

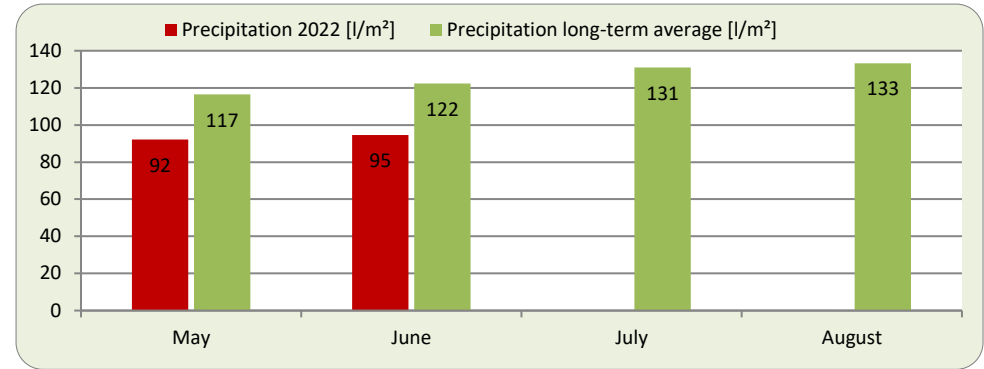

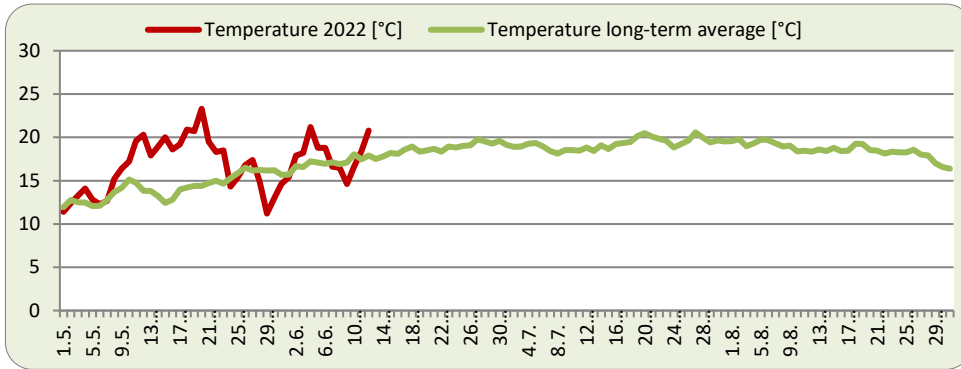

(Tendency: stable ↑, decreasing ←, increasing →)

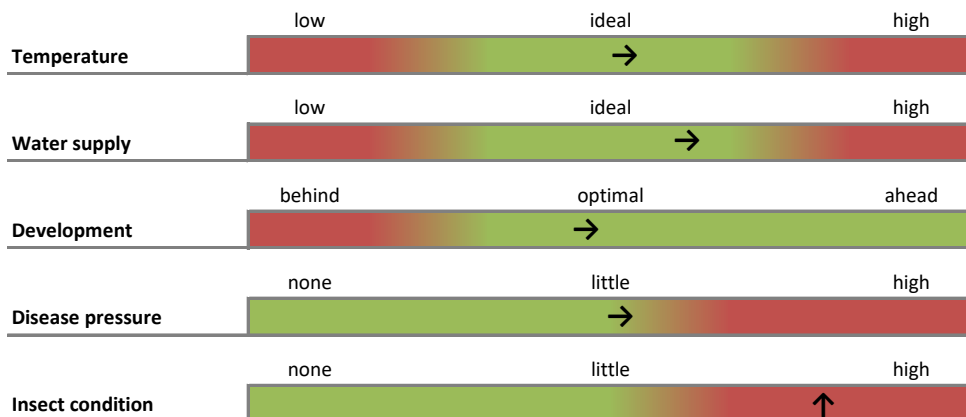

Report on Weather and Hop Growing Conditions: Week 23

Report Period: June 6, 2022 - June 12, 2022

TETTANANG

Comments: Good growing conditions continued to prevail, with the result that the first fields have already reached trellis height. Fertilization and plant protection measures against downy mildew were carried out.

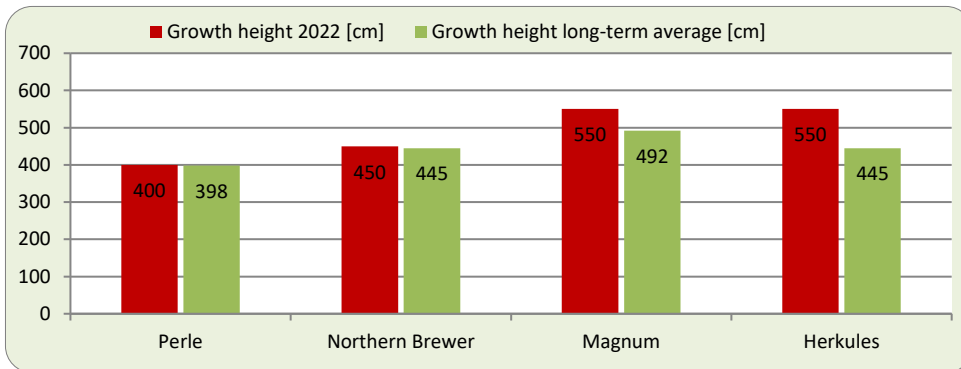

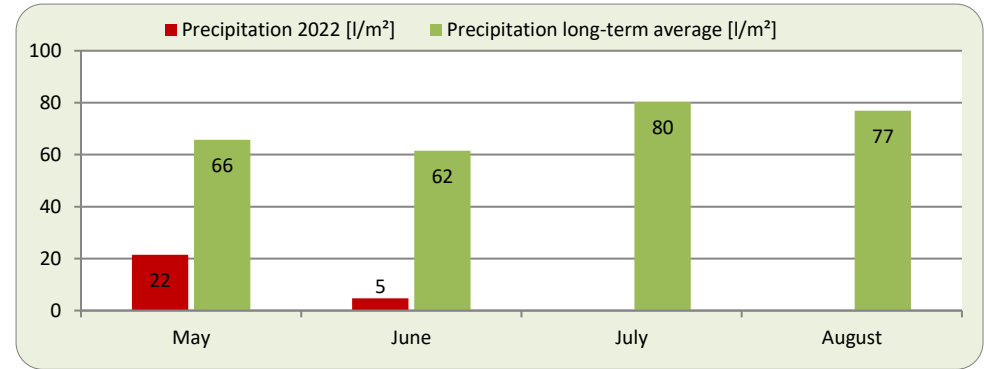

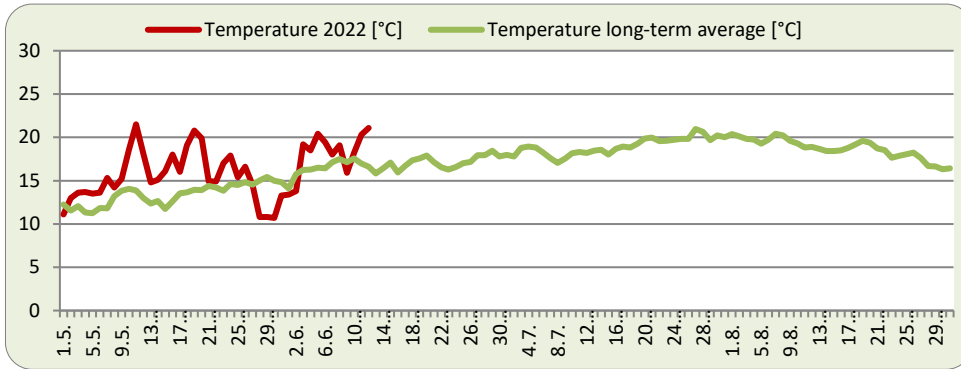

(Tendency: stable ↑, decreasing ←, increasing →)

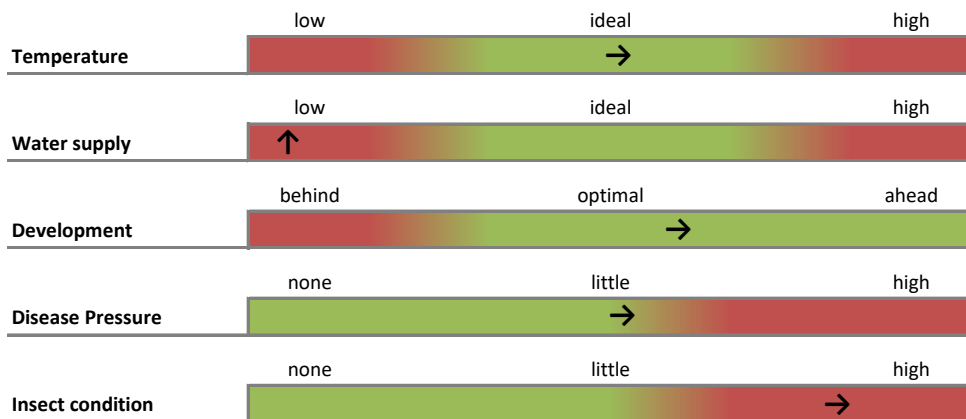

Report on Weather and Hop Growing Conditions: Week 23

Report Period: June 6, 2022 - June 12, 2022

ELBE SAALE

Comments: Due to a lack of rainfall, the soils have now dried out considerably. The first bittering hop fields have reached trellis height. Plant protection measures against the red spider mite and downy mildew were carried out.
