Report on Weather and Hop Growing Conditions: Week 24

Report Period: June 13, 2022 - June 19, 2022

ELBE SAALE

Comments: In the first half of the week, daytime temperatures were in the long-term average, at the end of the week the temperatures did rise well over 25 °C. The persistent drought continues to worsen the water supply. Currently, the farmers are busy with the second tillage. Plant protection measures against aphids were carried out as soon as the plants reached the control threshold.
