

Report on Weather and Hop Growing Conditions: Week 25

Report Period: June 19, 2023 - June 25, 2023

HALLERTAU

Comments: At the end of the week, after hot and humid days, thundery precipitation fell in small amounts in some regions. Some fields have reached trellis height. Side arm formation is hesitantly starting. Plant protection measures against powdery mildew, as well as aphids and spider mites were carried out.

Report on Weather and Hop Growing Conditions: Week 25

Report Period: June 19, 2023 - June 25, 2023

TETTANANG

Comments: The weather was warm and sunny. At the weekend there was thundery precipitation, which somewhat improved the water supply of the soil. Farms are mainly busy sowing catch crops and defoliating vines. Spray treatments against aphids and powdery mildew were applied.

Report on Weather and Hop Growing Conditions: Week 25

Report Period: June 19, 2023 - June 25, 2023

ELBE SAALE

Comments: In the Elbe-Saale region, the long-awaited precipitation finally arrived, and several of the farms benefited from abundant thundershowers. In between, temperatures also dropped. Soil tillage was carried out in some cases. The growth status is normal, the hops are healthy and began to form side arms.
