

WEATHER AND PLANT STATUS

HALLERTAU Week 26 – Week 27 June, 23th – July, 6th 2025

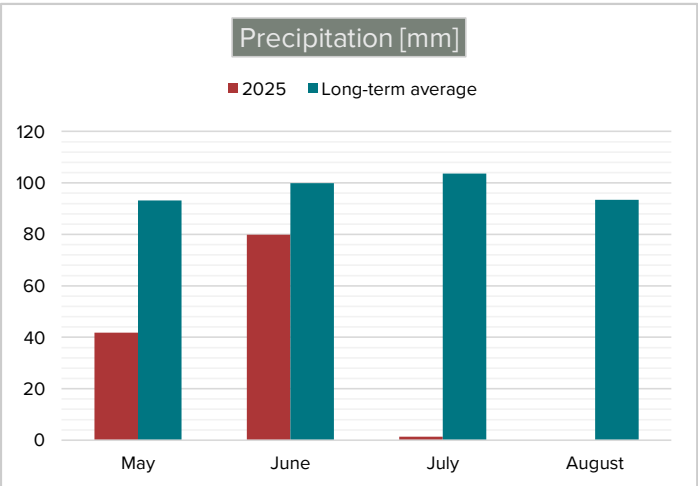

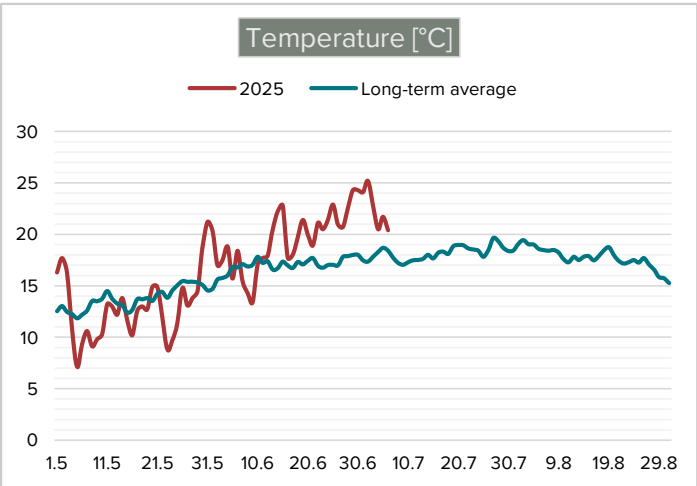

Current situation			
Growth	behind		optimal
	X ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	high		
Precipitation	X low		optimal
	high		

Comments

Significantly above-average temperatures combined with occasional light showers have characterized the past weeks. Early ripening varieties are already beginning to bloom. Due to increased infestation pressure from aphids, emergency authorization was granted for the plant protection product Sivanto Prime with the active ingredient Flupyradifurone. There is also high insect pressure from spider mites. Farms with irrigation systems have started to irrigate.

Variety	Comments	Development
Tradition	First signs of blooming	o
Perle	Above trellis height, first signs of blooming	o
Magnum	Single signs of blooming	o
Herkules	Above trellis height, single signs of blooming	o
(+ + very good; + good; o average; - weak; - - very weak)		

WEATHER AND PLANT STATUS

TETTNANG Week 26 – Week 27 June, 23th – July, 6th 2025

Current situation			
Growth	behind		optimal
	X ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	high		
Precipitation	X low		optimal
	high		

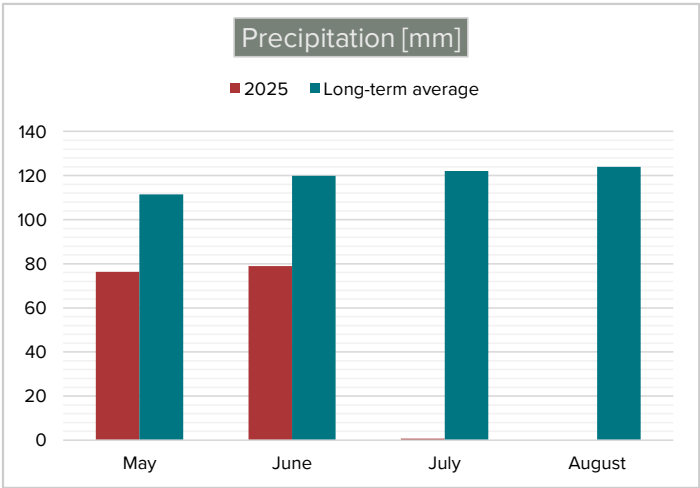

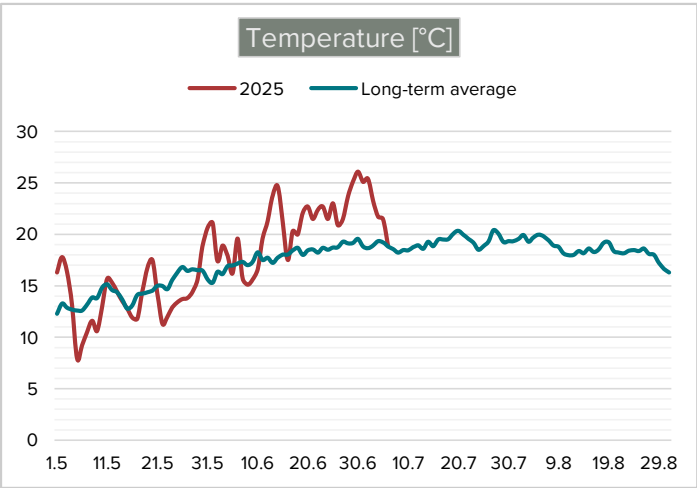

Comments

Dry conditions and hot temperatures also prevailed in the Tett nang growing area. There is still high insect pressure from aphids. The catch crops were sown.

Variety	Comments	Development
Tett nanger	Trellis height, formation of lateral arms	o
Mittelfrüher	Beginn of blooming	o
Tradition	Trellis height, formation of lateral arms	o
Herkules	Trellis height, formation of lateral arms	o

(+ + very good; + good; o average; - weak; - - very weak)

WEATHER AND PLANT STATUS

ELBE SAALE Week 26 – KW 27 June, 23^h – July, 6th 2025

Current situation				
Growth	X	behind		optimal
		ahead		
Disease pressure		high		low
Insect pressure		high		low
Weather trend upcoming week				
Temperature		low		optimal
		high		
Precipitation	X	low		optimal
		high		

Predominantly dry and hot days slowed down growth. The water supply is still sufficient in plants without irrigation, but we are hoping for rain. Various tasks such as defoliation, soil cultivation and plowing the rows were carried out. Spraying against mildew was necessary.

Variety	Comments	Development
Perle	Trellis height	- / o
Northern Brewer	Trellis height, Start of blooming	- / o
Magnum	Trellis height	- / o
Herkules	Trellis height, Formation of lateral arms	- / o
(+ + very good; + good; o average; - weak; - - very weak)
